A capacity of 150 MW was scheduled to be installed at the Berzdorf Power Station in the course of 1957, during its first construction stage. In 1958 and 1959, an additional 75 MW each were to be installed in order to raise the capacity of this power station to a total of 300 MW by the end of 1959. It is believed that a final capacity of 450 MW is planned for the Berzdorf power station. This goal will probably not be reached before 1960.
